

Junior Software Developer

T-Mining

T-Mining is one of the first high-tech companies in Belgium that is developing Blockchain powered applications for transport and logistics.

T-mining improves efficiency in logistics and transport by better data sharing and secure title transfer. For this we fully advocate using blockchain technology. By using this technology the role of middleman is reduced. This resolves a pain point in the transport sector where there are many parties involved with often little trust between them. Aside this block chain technology has unique features to transfer assets / rights and to ensure that a proper handover is done via transactions.

Read more about us on www.t-mining.be or follow us also on twitter via [@tminingbc](https://twitter.com/tminingbc)

We are looking for an enthusiastic developer to join our team.

Job contents:

- You develop and integrate software components
- You are responsible for the quality of these components and you follow-up on the testing
- You participate in the roll-out of these components in a production environment

Profile:
